

OS Installation

Note: We are using Oracle VirtualBox to create the VM. Please go to <https://www.virtualbox.org/wiki/Downloads> to download VirtualBox. Also, be sure use install: **VirtualBox 7.0.20 Oracle VirtualBox Extension Pack.**

Be sure to enable **efi** when setting up your hypervisor.

First assignment: Instructions for RHEL installation

Please follow the instructions below to install Red Hat Linux Enterprise. The password/username in the instructions are just examples, you can use the password and username of your choice, but make sure you do not forget them.

Please use the following for your VM hardware configuration:

1. If 1/3 of the host available disk space is greater than 5*the minimum requirements to install the OS, then use 5*the minimum disk apace to install RHEL 9.4
2. Use 1/3 of the host installed RAM
3. Use 1/3 of the host CPU cores

Host Machine Resource Information								
Disk Size	Used Space	Available Space	RAM Amount	Disk Controller	# CPU (Cores)	Architecture	Graphics	Filesystem
Virtual Machine for Your Fedora Workstation								
Disk Size		RAM Amount		Disk Controller (ex: sda)		# CPU (Cores)		

Table 1

Installing RHEL

1. **Welcome To Red Hat Enterprise Linux 9.4.:** Choose **English**
2. Click **Continue**
3. Click **Root Password**
4. Click the textbox **Root password** and type: *Passw0rd*.
5. Click the textbox **Confirm** and type: *Passw0rd*
6. Click **Done** (on the left side of the screen).
7. Click: Create User and type the following on the next screen:
 - a. **Full Name:** *type your full name* (check boxes: Make this user administrator), and require a password to use this account)
 - b. In the **Password** textbox, type: *Passw0rd*
 - c. In the **confirm password** textbox, type: *Password*
8. On the left of the screen, click: **Done**
9. In the **SYSTEM** column, click **Installation Destination**
10. Select the **sda** disk.
11. Click the **Custom** radio button-use Standard configuration
12. On the left side of the screen, click.
13. In the **SOFTWARE** column, click **Software Selection (choose the list of software to install)**.
14. At the completion, do an update (`sudo dnf update`)

If you want to view and rename the hostname

1. To view the hostname, **type:** *sudo hostnamectl*
2. To rename the hostname, **type:** *sudo hostnamectl set-hostname rhelserver.techlab.com* (replace hostname with your chosen name)

Register RHEL9.4 and update the system.

1. **type:** *sudo subscription-manager register*
 - a. **type** your computer password: *Password#123*
 - b. **type** your redhat username account: *cs372student*
 - c. **type** your redhat password account: *Passw0rd*
2. **type:** *sudo subscription-manager attach --auto* 3. **type:** *sudo dnf all clean* – clean the memory cache.
4. To update and upgrade RHEL, **type:** *sudo dnf update -y && sudo dnf upgrade -y*

To unsubscribe from the system **if needed**

1. **type:** *sudo subscription-manager remove --all*
2. **type:** *sudo subscription-manager unregister*
 - a. **type** your computer password: *Passw0rd*
 - b. if needed, **type** your redhat username account: *user1*
 - c. if needed, **type** your redhat password account: *Passw0rd*
 - d. **type:** *sudo subscription-manager clean*

Submission

1. Open a new Word document and name the file: *yourlastname_firstinitial_cs372_RHEL_Install (Alcime_j_cs372_RHEL_installed)*: 20 points.
2. **Create** and **complete** a Word table, similar to the one above. 30 points
3. Open you Linux terminal and type: *hostnamectl*. 20 points
4. Take a screenshot of the command result and paste it into your document. 40 points
